PROFESSIONAL SUMMARY

Data Analyst with a BSc in Mathematics and a Diploma in Data Analytics with Python. Completed a remote data analytics internship in data cleaning and validation, feature engineering support and Power BI dashboards for customer churn and lifetime value analysis. Applies SQL, Python, Excel, Power BI and Tableau across five analytics projects with measurable findings in exploratory data analysis, KPI reporting and dashboard development.

SKILLS

SQL and Databases: SQL, MySQL, aggregations, GROUP BY, CASE WHEN, subqueries, database querying

Python and Data Analysis: Python, Pandas, NumPy, Matplotlib, Seaborn, data analysis

Excel and Data Preparation: Microsoft Excel (Power Query, Pivot Tables, VLOOKUP, XLOOKUP, conditional formatting), data cleaning, data validation, data transformation, missing-value handling, duplicate removal

Business Intelligence and Visualization: Power BI, DAX, data modeling, Tableau, dashboard development, data visualization, KPI reporting

Statistics and Exploratory Analysis: Exploratory data analysis (EDA), descriptive statistics, correlation analysis, trend analysis

Machine Learning: Scikit-learn, Logistic Regression, Decision Tree, Random Forest, model evaluation (ROC-AUC, accuracy, precision, recall)

Tools and Development: Jupyter Notebook, VS Code, Git, GitHub, FastAPI

EXPERIENCE

Data Analytics Intern, Zaalima Development Pvt. Ltd. (Remote) May 2026 – Jul 2026

- Cleaned and validated 7,043 telecom customer records using Python and Pandas: converted data types, resolved 11 missing TotalCharges values and confirmed no duplicate records.
- Supported feature engineering in Python for customer churn and customer lifetime value (LTV) analysis.
- Developed Power BI dashboard visuals presenting churn drivers and LTV segments.
- Created dashboards presenting the outputs from a financial fraud detection model.

PROJECTS

Customer Churn Prediction and LTV Engine | View Project 2026

Python, *Scikit-learn*, *FastAPI*, *Power BI*

- Analyzed churn and LTV for 7,043 telecom customers, comparing Logistic Regression, Decision Tree and Random Forest classifiers (Random Forest: 0.84 ROC-AUC, 79% accuracy).
- Segmented customers into Bronze, Silver, Gold and Platinum LTV tiers of about 1,760 customers each, with LTV calculated as monthly charges × tenure.
- Built a 4-page Power BI dashboard with DAX measures reporting a 26.5% churn rate, 2.86M revenue lost to churn (17.8% of the total) and 1,227 high-value customers lost.
- Found churn highest on month-to-month contracts and in early tenure: a 47% churn rate within the first 12 months, against 7% at 61–72 months.
- Served the LTV model through a FastAPI endpoint.

Store Sales Analysis | View Project 2025

MySQL

- Analyzed 5,000 store orders (1.37M revenue) with 20 MySQL queries using aggregations, GROUP BY, CASE WHEN segmentation and subqueries.
- Found that Electronics generates 80% of revenue, Laptops are the top-earning product (312K) and Autumn is the strongest season.

Retail Sales Analysis | View Project 2025

Excel

- Analyzed 16,383 retail transactions (Jan 2023 – Dec 2024, 22.5M revenue) using Pivot Tables, Power Query, VLOOKUP, XLOOKUP and conditional formatting.
- Found revenue spread evenly across five product categories (Grocery highest at 20.3%) and a December peak of 2.0M, presented with revenue and customer KPI cards in an Excel dashboard.

Hazard and Inspection Analysis | View Project 2026

Tableau

- Built an interactive Tableau dashboard on 592 workplace safety observations (Apr 2023 – Aug 2024) by hazard category, project site and week, with KPI cards and filters.
- Identified Housekeeping (117) and Slip, Trip and Fall (101) as the largest hazard categories (37% of the 592 observations), with two sites accounting for 46%.
- Reported a 98% closure rate (580 closed, 12 open), with the lowest site closure rate at 83%.

Crime Data Analysis | View Project 2025

Python, *Pandas*, *NumPy*, *Matplotlib*, *Seaborn*

- Cleaned a 6,480-record, 50-column crime dataset in Pandas by imputing 2,536 missing numeric values with medians and removing 480 duplicates, leaving 6,000 records.
- Explored crime trends by year, state, crime type and victim demographics: Cyber Crime was the top category (1.23M cases), male victims were about 65% of the total, and 2012 cases were roughly double a typical year.

EDUCATION

Bachelor of Science in Mathematics, University of Calicut, Kerala, India Sep 2022 – Apr 2025

Diploma in Data Analytics with Python, OFSYS Education

CERTIFICATIONS

- IBM Certification in Data Analytics
- Certificate of Internship and Training in Data Analytics, Zaalima Development Pvt. Ltd. (May 2026 – Jul 2026)

LANGUAGES

English, Malayalam, Hindi
